

**STOP THE WASTE**

The energy saving attic access insulator.

Model	Width	Length	Height
AT-1	22"	54"	7"
AT-2	25"	54"	7"
AT-3	22"	54"	13"
AT-4	25"	54"	13"
AT-5	30"	60"	13"

Attic Tent Dimensions: (inside opening of attic hole not stair)(most common size sold 75-80% AT-2)

**The Attic Tent has multiple applications.**

It insulates & seals:

- Folding Attic Stairs**
- Knee Wall Doors**
- Attic Scuttle Holes**

See "Product" and "Installation" pages for details and applications.

**An age old problem...**

Through the years, homeowners who have been aware of air transfer/loss through the attic have attempted to remedy it by placing insulation around the attic door opening. Unfortunately, this technique doesn't provide an air tight barrier, therefore, little reduction in the amount of energy waste and air loss is achieved. It also creates harmful airborne particles of dust and fiberglass each time the attic door is opened or closed.

**Scientifically Engineered!**

The Attic Tent is a specially engineered, patented insulator designed to create an air transfer barrier between your attic and living areas. It is a practical and economical solution to a problem that has existed since homes were first built with overhead attic entries. That problem is wasted energy through and around the attic door and stairs.

**Attic Tent Is the Solution!**

The engineers at InsulSure solved the problem of attic stair air transfer/loss from the perspective of the homeowner. They designed a product that not only significantly reduces air loss, drastically lowering your energy bill, but also provides safe and easy zipper accessibility into your attic. It also keeps blown insulation up in the attic where it belongs, not on your floor, each time you open your attic stair door.
